The zero-to-first-100-customers playbook for an Indian SaaS

The single biggest unlock for this product is owning one unclaimed keyword category — "Google Maps / Google reviews → website" — which has near-zero commercial competition in Indian SERPs. Every competitor (Wix, Dukaan, Durable, Hostinger) still frames a website as something you build from scratch; nobody has yet defined the "paste-a-link-get-a-site" category in India. That gap, combined with a Hinglish/vernacular content moat and WhatsApp-led distribution, is the wedge. Budget discipline matters: at ₹5K–25K/month you cannot afford LinkedIn ads, Semrush, Performance Max, or any paid AI-visibility tool. You can afford Meta Lead Ads in Hinglish, Google Search on 15 hand-picked phrase-match keywords, AiSensy for WhatsApp, free SEO tools, and founder-led Reddit/LinkedIn presence. The six-month outcome this plan targets is **100–300 paying customers, one dominant AI-cited pillar page per vertical, and a repeatable ₹100–₹400 CPL lead engine**.

---

1. The keyword landscape — where a new domain can actually win

India's search intent splits cleanly into three buckets for this product, and the commercial wedge lives in the **transactional long-tail**, not the crowded head terms.

Head terms are a trap for a new domain. "Website for restaurant India" (4K searches/month), "Hostinger website builder India" (6K), and "gym website builder India" (1.5K) are all dominated by Wix, Hostinger, Shopify, and GoDaddy — incumbents with DR 80+ and million-dollar content budgets. Do not chase these in year one; target them only after 50+ topical pages have built domain authority.

The real opportunity is in three under-served clusters:

Cluster	Example keywords	Why it wins
"Google Maps / reviews → website" (hero category)	"Google Maps to website converter", "Google reviews to website", "instant website from Google listing", "auto website from Google Maps link", "Google Business Profile website builder India"	**Zero SaaS commercial competition** in Indian SERPs. Current results are generic iframe/embed tutorials from HubSpot and GeeksforGeeks. Own this in 90 days.
Hinglish + Devanagari vertical how-tos	"restaurant ki website kaise banaye" (2–3K), "gym ki website kaise banaye" (400), "clinic website kaise banaye" (200), "रेस्टोरेंट की वेबसाइट कैसे बनाएं", "chhota business website banane ka tarika"	Individually small, aggregate to **3–5K searches/month with near-zero SaaS competition —** only personal bloggers rank.
Price-led and city×vertical long-tails	"restaurant website under 5000 rupees", "cheap website for small shop India", "cafe website builder Bangalore", "gym website Pune", "salon website Hyderabad"	Currently dominated by local agencies and freelancers — a programmatic SEO template can capture 100+ pages.

Seventeen long-tails to target in months 1–6 (all ranked Easy or Very Easy for a new domain): gym ki website kaise banaye, salon ki website kaise banaye, clinic website kaise banaye, रेस्टोरेंट की वेबसाइट कैसे बनाएं, अपना बिज़नेस ऑनलाइन कैसे लाएं, Google Maps listing se website kaise banaye, benefits of website for gym India, chhota business website banane ka tarika, doctor clinic ki website kyon zaroori hai, how to convert Google reviews to website, Google Maps to website converter, Google Business Profile website builder India, instant website from Google listing, restaurant website under 5000 rupees, beauty parlour website kaise banwaye, one click website for business, auto website from Google Maps link.

Search-volume caveat: These numbers are from free-tier SEO tools and Google autocomplete patterns; validate with Keyword Planner once a Google Ads account is live.

---

2. Competitor map and the gaps to exploit

The Indian SMB website-builder market is fragmented across four archetypes, none of which has locked up the Google-Maps-native positioning.

Horizontal giants (Wix ₹1,400–₹5,000/mo, Squarespace ₹1,300–₹3,800, GoDaddy ₹199–₹1,700, Hostinger ₹149–₹649 promo): Massive content libraries and brand authority, but generic and design-first. FounderJar None of them build around existing Google Business Profile data.

Indian D2C commerce tools (Dukaan ₹583/mo, Instamojo free+₹10/day, Shopify India from ₹2,400, Zoho Sites from ₹500): All are pure ecommerce — weak fit for gyms, clinics, salons, and dine-in restaurants. (Jay Mehta) Bikayi has effectively collapsed (Inc42 reported revenue dropping from ₹1.9 Cr to ₹10 lakh/month). (Inc42 Media) Digital Showroom by DotPe claims 1 Cr+ merchants but is kirana-only. (Google Play)

Category SaaS (Restaurantify $15, UpMenu $49, Petpooja, Posist): Vertical focus, commission-free ordering, but US-pricing-anchored, no UPI-native checkout, no Hindi UX.

The single most dangerous competitor is Durable.co, which already ships a "Google Business Profile → website" generator in the US but has no INR pricing, no Hindi, no UPI support, and minimal India marketing. **Expect Durable to enter India within 12–18 months** — speed, Hinglish content, and UPI-native onboarding are the moat.

The post-Builder.ai vacuum matters too. Builder.ai entered administration in May 2025 after the "AI was 700 Indian engineers" scandal; its "Studio Store" gym/restaurant SKUs left orphaned traffic. Capture it with "Builder.ai alternative for Indian restaurants" content.

---

3. Generative Engine Optimization — the 2026 rewrite of SEO

AI Overviews now appear on ~47–50% of Indian searches; (Venkateswarayasoftwares...) **93% of Google AI-mode searches end without a click** (Semrush, Sept 2025). Being invisible in AI answers is the new being-on-page-two. The good news: **67.82% of AIO-cited sources don't rank in Google's top 10** for the same query (Surfer), so domain authority isn't the gatekeeper — content structure and off-site signals are. (Surfer)

Where AI engines pull citations from (Semrush analysis of 150,000 citations): Reddit 40.1%, Wikipedia 26.3%, YouTube 23.5%. (Soar Agency) Perplexity is Reddit-heavy (~46%); ChatGPT leans Wikipedia; Google AI Overviews pulls from Reddit, LinkedIn, YouTube. (Profound)

The five GEO moves that matter most for a zero-authority Indian SaaS:

First, **every pillar article opens with a 40–60-word direct-answer block** followed by 8–12 sections under 200 words each, with one statistic per 150–200 words linked to primary sources. (Frase) Princeton/Georgia Tech's GEO paper (KDD 2024) found this single pattern lifts citation rates 30–40%. (Digital Applied) Front-load aggressively — **44.2% of all LLM citations come from the first 30% of text.** (Position Digital)

Second, **build comparison pages with three tables each** — these get 25.7% more citations than prose. (Position Digital) Ship "vs Wix", "vs Dukaan", "vs Durable", "vs Shopify India" in month one.

Third, **seed Reddit authentically for 90 days.** Answer 10 SMB questions per week from a founder account across r/IndianBusiness, r/smallbusiness, r/restaurateur, r/fitnessindia, r/mumbai/r/delhi/r/bangalore. Only contextually mention the product where genuinely useful. Threads with ⩾15 upvotes get crawled into training data.

Fourth, **list on G2, Capterra, Product Hunt, SaaSHub, AlternativeTo, SaaSworthy, YourStory Gallery, and Inc42 startup directory**, and seed 15–20 real reviews in the first 90 days. Brands with active review profiles are **3× more likely to be cited by ChatGPT** (Surfer). Surfer

Fifth, **launch a YouTube channel with closed captions and on-page transcripts for every video** — YouTube is cited ~200× more than any other video platform in AI answers. Surfer The Hindi tutorial "Restaurant ki website kaise banaye — Google Maps se 1 click mein" should be the flagship upload in week one.

Additional GEO moves (rank-ordered): SoftwareApplication + FAQPage + HowTo + LocalBusiness schema on every page; Digital Clarity Wikidata entry for the brand (Google Knowledge Graph ingests Wikidata directly); Navodaya SEO HARO/Qwoted pitches plus Indian PR plays (YourStory, Inc42, Moneycontrol) — earned media distribution can increase AI citations up to 325% (Stacker, Dec 2025); Position Digital an original annual report ("State of Indian SMB Digital Presence 2026" based on a 500-business survey) because primary data is the single most citable asset type; AI Marketer Tools LinkedIn founder thought-leadership (LinkedIn is the #1 cited domain for professional queries across AI engines per Profound, March 2026); Position Digital llms.txt as cheap insurance Firebrand despite SE Ranking's 300K-domain study finding no measurable citation correlation yet. Search Engine Journal

Caveat on citation decay: AirOps' 2025 analysis of 45,000 citations found only 30% of brands retain AI visibility quarter-over-quarter. Plan for continuous re-optimization, not set-and-forget.

---

4. The 90-day content engine — 30 posts, 15 videos, 5 pillars

Five pillar hubs, each 3,500–5,000 words with 8–12 cluster articles linked bidirectionally: (1) Complete guide to creating a website for Indian restaurants, (2) Complete guide to creating a gym website in India, (3) Indian local-business digital playbook, (4) **Google Maps marketing for Indian businesses** (the product's native wedge), (5) AI and local business in India (GEO-citation bait).

Month 1 prioritizes foundation and broad intent: "How to create a website for your restaurant in India (2026 step-by-step guide)"; "How to make a gym website in India: zero coding, under 10 minutes"; "[Brand] vs Wix vs Shopify: best for Indian restaurants"; "15 best gym website templates for Indian fitness owners 2026"; "12 restaurant website examples from Indian eateries that drive orders"; city pages for Mumbai and Bangalore; the first Pune dhaba case study; a 27-element restaurant website checklist; and a contrarian "Why most Indian gym websites fail" opinion piece.

Month 2 expands to category depth and commercial intent: salon, clinic, and kirana-store how-tos; "[Brand] vs Dukaan vs Mydukaan: best for Indian local retailers"; "Google My Business vs a real website"; "20 best restaurant website builders in India (free + paid, 2026 ranked)"; Delhi NCR and Hyderabad/Chennai/Pune city pages; "Restaurant website cost in India 2026: ₹0 to ₹50,000 options compared"; and "From Google Maps to live website in 60 seconds: the playbook".

Month 3 goes after the flagship keyword and the long-tail: "How to convert Google reviews into a website: complete guide" — the single most important article to own; comparisons against Zoho Sites and WordPress; salon template listicles with booking integration; cafe, dental clinic, and boutique category guides; the original "State of Indian SMB Digital Presence 2026" survey report; Tier-2 city guides (Jaipur, Lucknow, Ahmedabad); a Coimbatore gym case study ("Hit ₹6 lakh/month revenue using their Google Maps link"); and the advanced "2026 Indian restaurant owner's SEO playbook (AI Overviews + Local Pack)".

YouTube in Hindi and Hinglish outperforms English 2–5× for Indian SMB content. (ColorWhistle) Eight long-form uploads (10–14 min): restaurant/gym/salon demos in Hindi, retail shop tutorial, "5 mistakes Indian gym owners make", "Zomato vs own website" comparison, full clinic walkthrough in English. Seven Shorts (<60s): live 45-second demo, Mumbai gym case-study teaser, "Why your ₹15,000 Wix site doesn't work", Justdial-to-website before/after, urgency hooks, Hindi-vs-English conversion data, founder-POV story. Publish between 7–9 PM IST. Put the primary keyword in the first 45 characters of the title and the direct answer in the first two description lines (AI engines extract these). (Geneo's blog)

Regional language priority for conversion lift (Hindi landing pages convert 3× better in Tier 2/3): (Jaksdigimark) Hindi first (mandatory, covers UP, Bihar, MP, Rajasthan, Delhi NCR), then Marathi (Maharashtra SMB density), Tamil (Chennai/Coimbatore/Madurai, low competition), Telugu (Hyderabad/Vizag), Gujarati (Surat/Ahmedabad wealth density), Kannada and Bengali last. Use human editors, not pure machine translation — and re-shoot regional YouTube videos rather than dubbing (dubbed content performs 40% worse on Indian YouTube). Use subdirectory hreflang (/hi/, /mr/, /ta/), not subdomains, to consolidate authority.

---

5. India-native distribution — where your buyers actually live

Indian gym and restaurant owners are not on LinkedIn. They are on WhatsApp, Facebook groups, Instagram Reels, Justdial, and the occasional Reddit city-sub. Budget accordingly.

WhatsApp is the single highest-leverage channel for this ICP. Among the four major BSPs, **AiSensy at ₹1,500/month basic** (AiSensy) **and ₹3,200 Pro** (AiSensy) **gives the best value** (no per-message markup, 150K+ businesses, free green-tick assistance); (AiSensy) Interakt, (Aisensy) Wati, and DoubleTick all add 20–257% markup on Meta's rates. (LeminAi) Meta's marketing-message rate rose 10% to **₹0.8631 per message** on January 1, 2026; utility/auth messages stay near ₹0.115; service conversations in the 24-hour window remain free. (AiSensy) A ₹5,000 AiSensy + ~3,000 marketing messages budget reaches around 3,000 opted-in owners per month. Under DPDPA 2023, explicit WhatsApp opt-in is mandatory and cannot be migrated from email/SMS consent (Dpdpa) — use Click-to-WhatsApp ads, QR codes at events, or customer-initiated chats to build the list. (Wati) Meta banned 92 million Indian accounts in 2024; cold blasts guarantee permanent bans. (Sendwo)

Facebook and Instagram groups worth joining (not spamming) include Gym Owners United, The Gym Owners Business Network, Indian Fitness Gym Lover, Fitness Trainers India, Restaurant Owners India, Cloud Kitchen India, Cafe Owners India, Zomato Swiggy Restaurant

Partners, MSME India, and Indian Startups & MSMEs. The NRAI (Nrai) India page has ~20K followers (Facebook) plus active Kolkata, Pune, Chennai, and Varanasi chapter pages. Spend the first two weeks listening, then post data-rich case studies with no product name; only DM interested owners when they ask.

Partnerships to pursue in priority order: Petpooja's integration program (100K+ restaurants, 200+ integrations (Bill Feeds) — auto-sync menu from their POS to your generated site) via partner@petpooja.com; NRAI (via NRAI Connect app or chapter secretaries) for sponsored knowledge sessions modeled on Petpooja's playbook; FHRAI (ZoomInfo) plus regional arms HRAWI, (Hrawi) HRANI, SIHRA, HRAEI; (Hrawi) Razorpay Rize for startup perks and payment integration; (Razorpay) DotPe's partner network; MuscleBlaze/HealthKart for gym co-marketing; FIA India for fitness outreach; Laghu Udyog Bharati's 55,000-member MSME network across 960 districts; (LUB Karnataka) and local ICAI branches (CAs advise SMBs on tech stacks and "approved vendor" tags drive Tier-2/3 trust).

Credibility stack (all free, do immediately): Udyam MSME registration (instant, PAN-linked, lifetime), (Quick License) Startup India DPIIT recognition (Kynafintax) (Compliance Calendar) (10–15 days, unlocks 80-IAC tax holiday, angel-tax exemption, (TaxRupees) ₹4,500 trademark fee vs ₹9,000), NASSCOM 10,000 Startups application, (10,000 Startups) iSPIRT SaaSBoomi community, T-Hub (Hyderabad) cohorts. Display all logos on the site footer — measurable conversion lift in Tier 2/3.

Directory and marketplace listings worth doing: IndiaMART free listing plus a ₹9K/quarter MDC trial (Ecomdigest) under "Website Development Software" (expect 15–25 leads/month at 3–5% conversion); Justdial city-level listings at ₹1,500/month each for 3–5 priority cities; Sulekha pay-per-lead (₹50–300/lead) for Tier 1/2. Skip TradeIndia — poor fit.

Reddit India subreddits to engage organically (9:1 helpful-to-self-promo rule): r/IndianBusiness, r/smallbusiness, r/IndianFood, r/fitnessindia, r/IndianFitness, r/ZomatoTalk, r/SwiggyIndia (for pain-point listening), r/IndianStartups, r/IndiaTech, and the major city subs (r/mumbai, r/delhi, r/bangalore, r/hyderabad, r/pune, r/chennai, r/kolkata, each 50K–500K members).

---

6. Restaurant positioning — complement, don't compete

The commission math is brutal and underappreciated. Zomato and Swiggy take 18–30% commission (average 25%) plus 1.9% payment fee plus 18% GST on fees plus 0.1% TDS (Sellersetu) — restaurants lose **30–35% per aggregator order**. (Spice Advisors) NRAI has filed a CCI complaint over private labeling (YourStory) (Blinkit Bistro, Swiggy Snacc), data masking, and deep discounting; ONDC charges only 10–11% and NRAI is actively pushing it. (Sellersetu) The product should position around seven complementary angles, not as a Zomato replacement.

Core messaging angles: zero-commission WhatsApp ordering for direct orders; ownership of customer phone numbers and order history; Google Business Profile power-up with the website link and "order direct" button; a catering/bulk-inquiry landing page (birthday parties, office tiffins — high-margin segments aggregators neglect); direct table reservations (Zomato Book

charges extra); Instagram ad landing pages that convert 3–4× better than sending paid traffic to a Zomato listing; WhatsApp broadcast for repeat orders ("Aaj ka special" to past customers).

Vertical headlines that convert in Hinglish: For QSR — "Swiggy pe ₹300 ka order → apko ₹195 milte hain. WhatsApp pe wahi order → ₹285. Seedha hisaab." For Instagram-driven cafes — "Instagram se log aate hain, par Zomato pe jaake order karte hain — profit bhi wahin jata hai. Ab aapki cafe ki apni website 60 sec mein." For fine dining — "Table reservation, pre-order, private party booking — sab ek link pe." For cloud kitchens (the highest-pain segment, 100% aggregator-dependent) — "Cloud kitchen ki zindagi aggregator pe tiki hai. Ek second channel banao — 20% orders WhatsApp pe, commission zero." For dhabas and local eateries — "Tumhare dhabe ka Google pe naam hai — magar website nahi. Customer number dhundta hai, nahi milta. Ab milega."

---

7. Paid ads on a shoestring — Meta first, Google second, everything else no

The platform math for this ICP at this budget is unambiguous.

Meta Ads (Facebook + Instagram) should absorb 55–70% of paid spend. India has among the world's cheapest CPMs (VGraple) (~₹115 per 1,000 impressions, ₹0.50–₹8 CPC, ₹100–₹400 CPL for SMB leads). (VGraple) Indian gym and restaurant owners live on Instagram Reels and Facebook. **Google Search Ads take 20–30%**, restricted to 15 hand-picked phrase-match keywords with a ₹25 CPC cap on manual bidding. **LinkedIn (₹150–₹500+ CPC, ₹3,000–₹8,000 CPL), X, YouTube in-stream, and ShareChat ads are wrong at this budget** — LinkedIn burns a ₹5K budget in 15–30 clicks.

Google Search structure: three tight ad groups — "instant website intent" (phrase match on `"website for my business"`, `"1 click website"`, `"free website for restaurant"`; exact match on `[google maps to website]`, `[website from google reviews]`), vertical-specific (`"gym website builder India"`, `"kirana website"`), and pain-point/competitor (`"alternative to wix"`, `"cheap website builder India"`, `"zomato alternative for own website"`). Mandatory negatives: `free, template, wordpress, download, tutorial, course, job, salary, pdf, developer, agency, designer, hire, github, code, html, logo, app, play store`. Run manual CPC for the first 30 days; do not let Max Conversions loose until you have 15+ conversions.

Meta structure: Campaign objective is **Leads with native Lead Forms** — Indian lead-form CPLs run 30–50% cheaper than driving to a landing page. (VGraple) Three campaigns split 60/20/20 across cold prospecting (Advantage+ audience with interest layering: Small business, Restaurant management, Gym management, Zomato, Swiggy, MSME, Udyam, Google My Business, WhatsApp Business, Petpooja; job titles Owner/Founder/Proprietor/Shopkeeper; age 25–55), lookalikes (1% LLA from purchasers, activate after 50+ customers), and 14–30-day retargeting.

Budget breakdowns:

Channel	₹5K tier	₹15K tier	₹25K tier
Meta cold prospecting	₹3,500	₹7,500	₹10,000
Meta retargeting	—	₹1,500	₹2,000
Meta lookalike	—	—	₹3,000
Google Search	₹1,500	₹4,500	₹5,000
YouTube Shorts (Demand Gen)	—	—	₹2,500
Click-to-WhatsApp ads	—	—	₹1,500
Creative/UGC production	—	₹1,500	₹1,000
Expected leads	40–80	150–250	300–500
Expected conversions	3–10	15–30	40–70

City prioritization: Tier-1 first for purchasing power (Bengaluru, Mumbai, Delhi NCR, Hyderabad, Pune, Chennai), but **Tier-2 has the best ROI** — lower CPMs, less saturation, and Tier-2 gym/restaurant owners respond 60–80% better to hyperlocal Hinglish messaging ("Aliganj ke gym owners ke liye" outperforms "Pan-India fitness centres"). (Sark Promotions) Priority Tier-2 cities: Ahmedabad, Jaipur, Lucknow, Indore, Coimbatore, Kochi, Chandigarh, Nagpur, Surat, Vadodara, Vizag, Bhopal. Mobile-only targeting (>95% of Indian SMB owners). Install Meta's Conversion API via free Stape.io to recover 15–25% of iOS-attribution-lost conversions.

Ad copy that works in Hinglish: "Restaurant ka apna website chahiye? 60 second mein ready." · "Aapke Google reviews se website bana denge. Bilkul free start." · "Zomato pe commission kyun dein? Apna website banao." · "Dukaan ka online presence — 1 click mein." CTAs that convert: "Get Free Website" beats "Sign Up"; "WhatsApp Demo Dekho" beats "Learn More"; "Free Mein Try Karo" beats "Get Started".

Landing page trust signals for Indian SMB: Made-in-India flag prominently in hero; UPI logos (PhonePe, GPay, Paytm) at signup — Indians panic at card-only flows; WhatsApp floating button bottom-right (85–95% open rates vs 10% for SMS); (Waakif) one real Tier-2 testimonial video shot on phone (not stock footage); "GST invoice available" stated explicitly; Hindi/English toggle top-right; Razorpay badge; "No credit card required"; pricing anchored low ("Less than ₹10/day" or "Less than one Swiggy order a week"); live chat in Hindi 10am–8pm IST; paste-Google-Maps-URL input box above the fold with instant preview before signup.

---

8. The tracking stack — under ₹2,000/month

The free stack handles 90% of what Semrush would and should be set up in week one: Google

Search Console (DNS-TXT verification on the domain property — required for the new branded-queries AI filter rolled out November 2025), Google Analytics 4, Google Tag Manager, Microsoft Clarity (free heatmaps and session recordings, unlimited), Google Trends India, Google Keyword Planner, Ahrefs Webmaster Tools, Bing Webmaster Tools, and Looker Studio for dashboards.

Branded vs non-branded traffic tracking: Use GSC's new native AI-powered branded-queries filter (Performance → Search Results → New Filter → Branded/Non-branded toggle) (ALM Corp) (Google) once the site has sufficient query volume. Until then, use a regex fallback in GSC (`(?i)brandname|brndnm|common-typos`) (Aubreyyung) and replicate in Looker Studio as a calculated field (`CASE WHEN REGEXP_MATCH(Query, '(?i).*brandname.*') THEN "Branded" ELSE "Non-branded" END`). (Porter Metrics) In GA4, link to GSC for the Queries report and create audiences based on landing-page patterns (blog = non-branded; homepage/pricing = branded).

Paid tools under ₹2,000/month — two recommended stacks:

Stack	Monthly cost	Components
Best overall	~₹900 effective	Ubersuggest lifetime deal (Newstandard) ₹10,000 one-time (≈₹280/mo over 3 years) + RankMath Pro ₹600/mo + all free tools
Indian-first	~₹2,100	RankWatch India plan (Brevo) + free stack + NeuronWriter ₹1,600 for content optimization

Avoid at this stage: Semrush Pro (~₹9,800/mo), (TrackSEO) Ahrefs Lite (~₹9,000/mo), Moz Pro (~₹4,100/mo), and every paid AI-visibility tool — Profound ($499), Peec AI (€89), Otterly AI Lite ($29), (Discovered Labs) Semrush AI Toolkit ($99). **Track AI citations manually for now:** run 10 prompts weekly in ChatGPT, Perplexity, Gemini, Claude ("Best website builder for Indian restaurants", "Google Maps to website tool", "How can gym owners build a website fast"), log results in a spreadsheet, (Dataslayer) and monitor GA4 referral traffic from chatgpt.com, perplexity.ai, gemini.google.com, and copilot.microsoft.com. (Geneo's blog) Revisit paid AI tools once budget crosses ₹1 lakh/month.

---

9. Outreach and cold sales on ₹0 budget

Google Maps scraping is legal for public data (name, address, phone, rating) under Indian law — DPDPA 2023 only covers personal data, and Google's ToS creates civil, not criminal, exposure. Copyrighted reviews and photos are off-limits. Cheapest stack: omkarcloud's open-source scraper (free, 200 searches/month via the free API tier), (GitHub) then Outscraper (pay-as-you-go, ~₹170–830 per 1,000 leads including email/phone enrichment), (Outscraper) Apify Google Maps Scraper (~₹40–170 per 1,000 places), (DEV Community) or Scrap.io (100 free leads, then ₹3–8K/month with India categories). (Scrap)

Enrichment and sending: Hunter.io or Skrapp for email discovery, then Instantly/Smartlead/Saleshandy (₹2–5K/month) for cold email. **Never cold-WhatsApp scraped numbers** — only Click-to-WhatsApp ads and opted-in lists. Apollo.io's India coverage is weaker than Saleshandy's Lead Finder (800M+ contacts, strong India/MENA); SalesHandy Lusha is US/EU-focused; Adapt.io is an Indian-built alternative; Kaspr is best for LinkedIn-first prospecting.

Cold email template (Hinglish) that works: Subject "Zomato commission se thak gaye? 60-sec mein dekhiye..." Body opens with a personalized Google-review compliment, states the commission math (28% aggregator cut), offers a pre-built demo at `auto-generated-preview.com/[restaurant-slug]`, adds a 2-minute Loom, states ₹X/month with 7-day free trial, and signs off with DPIIT recognition for trust.

Field sales is economically viable in Tier 2/3. At a ₹1,500 CAC cap on a ₹999/month SaaS, payback is 1.5 months. Hire commission-only reps from OLX Jobs / Apna / WorkIndia at ₹300–500 per signup plus ₹2K base. Target underserved cities where Petpooja and DotPe don't have direct sales: Jaipur, Indore, Lucknow, Kanpur, Nagpur, Surat, Coimbatore, Vizag, Bhubaneswar, Ludhiana, Chandigarh, Kochi. Piggyback on Petpooja POS installers — pay ₹500 referral per closed customer. At ₹15K/month outreach spend this models to ~200 meetings, ~20 signups, ₹20K MRR — breakeven month one, profitable month two.

---

10. Six-month execution roadmap

The core principle: in months 1–2, buy time by renting attention (Meta + Google Ads + cold outreach) while planting SEO and GEO seeds that compound. By months 5–6, organic and referral should carry 40%+ of pipeline.

Month 1 — Foundation (budget ₹5K–15K)

Claim all free assets in the first week: Udyam MSME registration, Startup India DPIIT application, GSC DNS-verified domain property, GA4 + GTM + Microsoft Clarity, Ahrefs Webmaster Tools, Bing Webmaster Tools, Wikidata entry, G2/Capterra/SaaSHub/AlternativeTo/Product Hunt listings, Google Business Profile for the SaaS itself, Meta Pixel + Conversion API via Stape.io. Publish three pillar articles (restaurant, gym, Google-Maps-to-website) with full FAQ/HowTo/SoftwareApplication schema and 40–60-word direct-answer blocks. Launch the YouTube channel with three videos — Hindi restaurant demo, Hindi gym demo, English walkthrough — each with full transcripts embedded on a landing page. Begin founder LinkedIn posting (2–3 long-form posts/week) and Reddit seeding (10 helpful answers/week across five subs). Launch ₹3,500 Meta Lead Ads cold prospecting in Hinglish and ₹1,500 Google Search on 15 phrase-match keywords, manual CPC, ₹25 cap. AiSensy Basic ₹1,500 + join 10 Facebook groups. **Target: 40–80 leads, 3–10 paying customers, 3 pillar pages live.**

Month 2 — Depth and signal-building (budget ₹10K–15K)

Ship the "Google reviews to website" free tool (hosted at /reviews-to-website) and seven more blog posts (salon, clinic, kirana how-tos; Dukaan comparison; GMB-vs-website explainer; 20-builders listicle; Delhi city page). Start Hindi translations of the top-three performing English posts. Publish first case study with real INR metrics. Apply to Petpooja's integration program. Apply to NASSCOM 10K Startups. Pitch first HARO/Qwoted + YourStory/Inc42 story. Begin IndiaMART free listing + ₹3K MDC quarter trial. Continue Reddit/LinkedIn cadence. Seed 5 G2/Capterra reviews. **Target: cumulative 100–150 customers, 10 ranking pages on page 1–2, first AI citation captured in Perplexity or AIO.**

Month 3 — Expansion (budget ₹15K–20K)

Publish the flagship "How to convert Google reviews into a website" article plus eight more (Zoho comparison, salon templates, cafe guide, dental clinic guide, boutique guide, Tier-2 city pages, Coimbatore gym case study, restaurant SEO playbook). Launch the **"State of Indian SMB Digital Presence 2026"** primary research — survey 500 Indian owners via WhatsApp/Google Forms. Release under Creative Commons, pitch to 20 publications. Add Marathi and Tamil as the next regional languages. Activate Meta 1% lookalikes once 50+ customers exist. Launch Click-to-WhatsApp ads for high-intent segments. First NRAI chapter sponsorship (one knowledge session, ₹2K). **Target: 200+ customers, original research earning 30+ backlinks, first YourStory/Inc42 feature, 25 G2/Capterra reviews.**

Month 4 — Programmatic scale (budget ₹20K–25K)

Deploy programmatic SEO for city × vertical (20 cities × 5 verticals = 100 pages), each with LocalBusiness schema, real Google review embeds, and Hinglish FAQ blocks. Hire one commission-only field sales rep in Jaipur or Indore (test city). Launch YouTube Shorts Demand Gen at ₹2,500/month. Begin LinkedIn Sales Navigator outreach to 200 restaurant owners/week. Join Laghu Udyog Bharati state chapter; pitch workshop in one state. Begin Quora India answer seeding (3 questions/week). **Target: 350+ customers, 50+ programmatic pages ranking, ₹30K+ MRR.**

Month 5 — Partnerships and compounding (budget ₹20K–25K)

Land Petpooja integration (auto-sync menus) — if closed, becomes the flywheel. Sign co-marketing with one supplement brand (MuscleBlaze or HealthKart) for gym channel. Launch two more regional languages (Telugu, Gujarati). Refresh top 10 content pieces for freshness (AI engines cite content 25.7% fresher than traditional search). First Inc42/YourStory guest contribution. Add second field rep in a second Tier-2 city. Meta budget skews more toward LLA and retargeting as cold CPL rises with saturation. **Target: 500+ customers, Petpooja integration live, two regional language pages indexed, first DPIIT tax-holiday filing.**

Month 6 — Consolidation and next-bet seeding (budget ₹25K)

Audit the keyword-ranking list — refresh posts that slipped, double down on those nearing page 1. Launch a small PR push around six-month metrics ("How [Brand] helped 500 Indian

businesses skip aggregator commissions"). Begin testing LinkedIn Ads at small scale (₹3K test budget) only if LTV data justifies the ₹3–8K CPL. Add Bengali and Kannada. Evaluate moving off Ubersuggest to SE Ranking or Mangools if ranking tracking needs exceed free-tier limits. First CA firm partnership pilot in Pune or Ahmedabad. **Target: 750–1,000 paying customers, ₹5–8 lakh MRR, 60+ content pieces live, brand mentioned in 3+ AI-engine answers for target queries.**

Key risks and what would change this plan

Three risks deserve a separate escalation plan. **Durable.co's India entry**, expected within 12–18 months, would compress the Google-Maps-native positioning window — if it happens in months 4–6, accelerate regional-language moat and Petpooja exclusivity. **Reddit citation volatility** (August 2025 saw Reddit's ChatGPT citation share drop from ~60% to ~10% in six weeks) means don't build single-source dependency on any platform; diversify citations across Wikidata, YouTube, LinkedIn, and earned media. **WhatsApp rate inflation** — Meta raised marketing rates 10% in January 2026, and further hikes are likely; model 15–20% annual cost inflation on the WhatsApp channel.

The winning bet here is boring and repeatable: publish the most useful category-specific Hinglish content anyone has written for Indian SMBs, let AI engines cite it, convert attention with a free-tool hook (paste-a-Maps-URL-get-a-site), and close with WhatsApp-first sales at ₹100–₹400 CPL. Everything else is noise.
